How to Approach Side Projects

Cassidy Williams

Software Engineer & Developer Evangelist at Venmo

cassidoo.co

Problem:

It's hard to start and work through a side project.

Solution:

Listen to me.

Iterate! Approach the project in sprints.

Set rules for yourself.

The feeling of making progress is just as important as actual progress.

Working on projects doesn't always mean coding.

Log your work.

Don't forget to focus on why you're doing this project.
