- The Context API
- **Oh my**

Apollo GraphQL

Apollo GraphQL

A single versatile query system to replace a patchwork of legacy APIs, with all the devtools and cloud services you need to run GraphQL at scale

Apollo GraphQL

- Establishes a data graph
- All clients and micro services speak in the exact same way

```
const SESSION_USER = gql`  
  query CreateSessionUser {  
    sessionUser {  
      id  
      pro  
    }  
  }`;  
`;
```

```
const SESSION_USER = gql`  
  query CreateSessionUser {  
    sessionUser {  
      id  
      pro  
      avatar  
      username  
    }  
  }`;  
`;
```

Then it all went wrong

(dramatic pause)

Apollo is pretty new.

Using new technologies

Using new technologies

- Ask a lot of questions
- Don't be afraid to contact the maintainers/team behind the technology
- Look under the hood
- **Share your knowledge!**

Thank you!!
